

Changing healthcare one claim at a time.

PEDIATRIC BILLING SOLUTIONS

Of patients say paying for healthcare services is difficult or inconvenient.

Of patients prefer to receive electronic healthcare bills instead of by mail.

Of patients take more than three months to pay their bills.

Comprehensive Billing Management Services Exclusively for Pediatricians Using PCC Software.

Founded by Dr. Steven Hirsch, MD, FAAP, our mission is simple, "We optimize patient care and practice profitability by enhancing billing and management processes." We do more than post claims. We help practices increase revenue and patient satisfaction by using time-tested strategies for improved scheduling templates, HEDIS measures, Bright Futures screening test implementation and more.

Spend less time on practice administration and more time with patients.

Questions or disagreements related to billing, which are bound to occur, must be handled with professionalism and understanding.

Unfortunately, pediatric practices sometimes lose loyal families or receive a negative online review because of a billing disagreement that could have been prevented by an experienced billing company. Don't let this happen (or continue to happen) in your practice.

Schedule a free assessment today!

Provide better patient care.

Increase revenue and cash flow.

Get back to being a doctor.

Do any of these situations sound familiar?

Contact us for a **FREE** assessment!

I have someone handling my billing, but I'm not sure if they are doing a good job.

Many pediatricians have been in the same boat and that is why PBS offers a free financial assessment for potential clients. Using our proven revenue management strategies, PBS can run basic A/R reports and ask the right questions to ensure that your practice revenue accurately reflects the workload of your practice.

I have an in-house person managing billing, and I don't want to get rid of him or her.

We understand. Nothing is more important than valued staff. In our experience, working with current employees to utilize their skill-sets is key to maximizing office efficiency. We are happy to work with existing staff to figure out where they can best be utilized to optimize profitability. In other words, we are happy to re-train your in-house billing manager for a role that supports improved billing and practice management.

I don't think I'm seeing the profitability or cash flow I should with all the patients I am seeing.

There are several reasons pediatric practices do not see the consistent revenue or cash flow they expect based on the volume of patients they encounter. Through a unique practice assessment, PBS will help determine if there is a breakdown somewhere in the revenue management cycle and highlight areas where PBS can help improve profitability.

I do all the billing myself because I don't trust anyone else to do it.

We completely understand because our personal experience was the same for over 10 years. We understand the need for total confidence in your biller as well as complete transparency. PBS offers both credibility based on experience and open communication which allows for practices to maintain oversight of their revenue.

I have some bad reviews related to patient care or billing.

Unfortunately, this is not uncommon. A negative patient experience due to a billing misunderstanding can erode the trust a patient has in their doctor and their practice. PBS works diligently to ensure that all patient interactions with the office regarding billing are handled professionally, quickly, and competently. Providing office staff with the tools to answer basic concerns and questions helps to improve patient satisfaction with billing questions.

I feel rushed with my patients as I try to get everything done at once.

This too is very common for pediatricians in private practice today. Maximizing profitability means that you can potentially see fewer patients each day and still generate enough revenue to support your practice. PBS provides the strategies, tools, and resources necessary to ensure that your practice continues to deliver the highest level of healthcare to your patients while maximizing practice profitability.

My heart is in medicine, I'm a great doctor, but keeping up practice management is causing me to feel frustrated.

Practicing medicine and managing the business side of a pediatric practice are different skill sets which require unique knowledge and experience. Why not use your skills as a doctor to continue providing outstanding healthcare and allow PBS to manage your revenue cycle effectively?
